

# Enhanced Auto Order

## Automated Order Management

Mistakes are inevitable, and the world of fuel logistics is no exception. When mistakes happen at the order desk, customers run out of fuel and trucks arrive to fill tanks that can't accept the full load.

In contrast, enhanced auto ordering takes human error out of the equation. The system continuously monitors tank inventories, applying your preferred operational practices, to generate orders automatically and dynamically when you and your customers need them.

Increased Productivity

Automation Over Manual Processes

Governed by Your Inputs

Perpetual Inventory Monitoring

## Order desk transformation

- Continuous inventory monitoring
- Flexible order generation and handling
- User-driven automation
- Accurate, on-time orders
- Reduced runouts & retains
